# PROJECT EXPLANATION – ANALYTICS PLATFORM DASHBOARD

## OBJECTIVE

The goal of this project is to design an admin dashboard to monitor user adoption, engagement, and feature usage of an analytics platform.

## APPROACH

A data model was created using Users, Sessions, Events, Projects, and Models tables to capture user behavior and ML workflow.

Sample data was generated to simulate platform activity, including user logins, data uploads, EDA execution, model training, and result export.

## KEY FEATURES

- User activity tracking (DAU, sessions)
- Feature usage analysis (event types)
- Funnel analysis (login to export)
- Model performance tracking

## INSIGHTS

- Most users perform login and upload actions, but fewer complete the full workflow
- Engagement varies across regions
- Some users are more active, indicating power users

## CONCLUSION

The dashboard helps identify user engagement patterns, drop-off points, and opportunities to improve platform usage and retention.
